

1.add attributes for any objects with constructor

```
In [7]: class Employee :  
        def __init__(self,name,age,email):  
            self.name = name  
            self.age = age  
            self.email = email
```

```
In [3]: emp1 = Employee('ahmed',25,'ahm7dkhalifa@gmail.com')
```

```
In [4]: print(emp1.name)
```

ahmed

2.Modify Value of Instance Variable

```
In [5]: emp1.name = "asd"
```

```
In [6]: print(emp1.name)
```

asd

```
In [ ]:
```
