

## 1.add attributes for any objects with normal Method

```
In [5]: class Employee :  
        def __init__(self,firstName,lastName):  
            self.firstName =firstName  
            self.lastName = lastName  
  
        def setFullName(self):  
            self.fullName = self.firstName + " " + self.lastName
```

```
In [7]: emp1 = Employee('ahmed',"khalifa")
```

```
In [9]: print(emp1.firstName)  
  
ahmed
```

```
In [10]: print(emp1.lastName)  
  
khalifa
```

```
In [12]: #this well give error  
         #print(emp1.fullName)
```

```
In [14]: emp1.setFullName()
```

```
In [15]: print(emp1.fullName)  
  
ahmed khalifa
```

## modify attributes that implement in normal method

```
In [16]: emp1.fullName = "asd zxc"
```

```
In [17]: print(emp1.fullName)  
         print(emp1.firstName)  
         print(emp1.lastName)  
  
asd zxc  
ahmed  
khalifa
```

```
In [ ]:
```
